Question 5

Mark 0.00 out of 1.00

EN: An integer m is divisible by an integer d if there is an integer k such that $m = k \cdot d$. Suppose a and b are integers such that a is divisible by a and b is divisible by a.

Suppose we consider the following statements:

- 1. S1: a + b is always divisible by 10.
- 2. S2: ab is always divisible by 12.
- 3. S3: 2a+b is always odd .
- 4. S4: a(b+1) is always divisible by 4.
- 5. S5: 9a-5b is always odd.

Choose all statements that are true based on the previous assumption. Write your answer in the following Python format:

S1 = <True/False>

S2 = <True/False>

S3 = <True/False>

S4 = <True/False>

S5 = <True/False>

For example, if you think that S1, S2, and S3 are the correct choices while S4 and S5 are incorrect, then you need to write

- S1 = True
- S2 = True
- S3 = True
- S4 = False
- S5 = False

ID: Sebuah bilangan bulat m habis dibagi d jika terdapat bilangan bulat k sehingga $m=k\cdot d$. Misalkan a dan b adalah bilangan bulat dengan sifat a habis dibagi 4 dan b habis dibagi 6.

Misalkan kita meninjau pernyataan-pernyataan berikut:

- 1. S1: a+b selalu habis dibagi 10.
- 2. S2: ab selalu habis dibagi 12.
- 3. S3: 2a + b selalu ganjil.
- 4. S4: a(b+1) selalu habis dibagi 4.
- 5. S5: 9a-5b selalu ganjil.

Piihlah semua pernyataan yang benar berdasarkan asumsi sebelumnya. Tuliskan jawaban Anda dalam format Python berikut:

- S1 = <True/False>
- S2 = <True/False>
- S3 = <True/False>
- S4 = <True/False>
- S5 = <True/False>

Sebagai contoh, jika Anda berpikir bahwa S1,S2, dan S3 adalah jawaban yang benar sedangkan S4 dan S5 salah, maka Anda perlu menulis

- S1 = True
- S2 = True
- S3 = True
- S4 = False
- S5 = False

```
Answer: (penalty regime: 20,40, ... %)

Reset answer

| Question 9 | |
|--------------------|--|
| Not answered | |
| Marked out of 1.00 | |

EN: In a jar, there are 86 candies as follows:

- 5 chocolate candies,
- 9 strawberry candies,
- 19 vanilla candies,
- 13 coffee candies.
- 8 mint cadies.
- 11 milk candies,
- 21 orange candies,

All candies have the same and identical wrappers. You are asked to take a number of candies so that you get at least four flavors and each flavor is represented by at least two candies. For example, you get two chocolate candies, two strawberry candies, two vanilla candies, and two coffee candies; or two mint candies, two milk candies, two orange candies, and two coffee candies. What is the minimum number of candies should you take if the candies are taken randomly? (You must ensure that you get at least four different flavors and each flavor is represented by at least two candies.)

ID: Di sebuah toples terdapat 86 permen dengan rincian:

- 5 permen cokelat,
- 9 permen stroberi,
- 19 permen vanila,
- 13 permen kopi,
- 8 permen mint,
- 11 permen susu,
- 21 permen jeruk,

Semua permen memiliki **bungkus yang sama dan identik**. Anda diminta untuk **mengambil sejumlah permen dengan syarat Anda memperoleh setidaknya empat rasa dan setiap rasa diwakili oleh setidaknya dua permen**. Sebagai contoh, Anda memperoleh dua permen cokelat, dua permen stroberi, dua permen vanila, dan dua permen kopi; atau dua permen mint, dua permen susu, dua permen jeruk, dan dua permen kopi. Paling sedikit, berapa banyak permen yang harus Anda ambil jika pengambilan dilakukan secara **acak**? (Anda harus memastikan bahwa Anda memperoleh setidaknya empat rasa permen yang berbeda dan setiap rasa diwakili oleh dua permen.)

| Answer: | | × |

EN: In a jar, there are 95 candies as follows:

- 3 chocolate candies,
- 17 strawberry candies,
- 9 vanilla candies,
- 13 coffee candies.
- 15 mint cadies.
- 5 milk candies,
- 19 orange candies,
- 14 banana candies.

All candies have **the same and identical wrappers**. You are asked to **take a number of candies so that at least you get four different flavors** (for example, you get one chocolate candy, one strawberry candy, one vanilla candy, and one coffee candy; or one chocolate candy, one vanilla candy, one mint candy, and one milk candy; or one strawberry candy, one coffee candy, one orange candy, and one mint candy). What is the minimum number of candies should you take if the candies are taken **randomly**? (You must ensure that you get four different flavors.)

 ${\bf ID}$: Di sebuah toples terdapat 95 permen dengan rincian:

- 3 permen cokelat,
- 17 permen stroberi,
- 9 permen vanila,
- 13 permen kopi,
- 15 permen mint,
- 5 permen susu,
- 19 permen jeruk,
- 14 permen pisang.

Semua permen memiliki **bungkus yang sama dan identik**. Anda diminta untuk **mengambil sejumlah permen dengan syarat Anda memperoleh setidaknya empat rasa berbeda** (misalnya Anda memperoleh satu permen cokelat, satu permen stroberi, satu permen vanila, dan satu permen kopi; atau satu permen cokelat, satu permen vanila, satu permen mint, dan satu permen susu; atau satu permen stroberi, satu permen kopi, satu permen jeruk, dan satu permen mint). Paling sedikit, berapa banyak permen yang harus Anda ambil jika pengambilan dilakukan secara **acak**? (Anda harus memastikan bahwa Anda memperoleh empat rasa permen yang berbeda.)

| Marked out of 1.00 | |

EN: Find the result of $2+10+18+26+\cdots+999$ 999 986 + 999 999 994 + 1 000 000 002. You may use a Python interpreter or the formula of arithmetic or geometric series you learn in high school. (Hint: use Python interpreter or MS Excel to ease your calculation. The answer is an integer consisting of 17 digits.)

Note: do not use periods, commas, or spaces as digit separators. For example, if your answer is $123\ 456\ 789\ 987\ 654\ 321$ then write 123456789987654321.

ID: Carilah nilai dari $2+10+18+26+\cdots+999$ 999 986 + 999 999 994 + 1 000 000 002. Anda dapat memakai interpreter Python atau formula untuk deret aritmetika atau geometri yang Anda pelajari di sekolah menengah. (Petunjuk: gunakan interpreter Python atau MS Excel untuk mempermudah kalkulasi Anda. Jawaban adalah bilangan bulat yang terdiri dari 17 digit.)

Catatan: jangan menggunakan titik, koma, atau spasi untuk pemisah digit. Sebagai contoh, jika jawaban Anda adalah $123\ 456\ 789\ 987\ 654\ 321$ maka tulis 123456789987654321.

Answer:

The correct answer is: 62500000750000000

EN: A sequence a_n is defined recursively as follows:

$$a_0 = 1, a_1 = 2, a_2 = 3$$
 and $a_n = 4n \cdot a_{n-1} + 3n \cdot a_{n-2} + 2n \cdot a_{n-3}$ for any integer $n \geq 3$.

What is the value of a_4 ?

 ${f ID}$: Sebuah barisan a_n didefinisikan secara rekursif sebagai berikut:

$$a_0=1$$
, $a_1=2$, $a_2=3$, dan $a_n=4n\cdot a_{n-1}+3n\cdot a_{n-2}+2n\cdot a_{n-3}$ untuk setiap bilangan bulat $n\geq 3$.

Berapakah nilai dari a_4 ?

Answer:

×

Partially correct

Mark 0.25 out of 1.00

EN: Construct a Python 3 function sum(n) that takes a positive integer n as an input and performs the following computation:

$$sum(n) = 2 + 7 + 12 + 17 + \cdots + (5n - 13) + (5n - 8) + (5n - 3).$$

The value of n is between 1 and 10^{12} . The time limit for the computation is 1 second per test case. The memory limit for the computation is 16 MB. To make your code efficient, derive an explicit formula (closed form) of sum(n) using your knowledge learned in high school. You may further justify the correctness of your formula using induction.

Python hint: if a, b, and c are integers and c divides ab, then the integer expression (ab)/2 is represented as (a*b)//2. The integer expression a^b is written as a**b.

ID: Buatlah sebuah fungsi Python 3 sum(n) yang mengambil bilangan bulat positif n sebagai masukan dan melakukan komputasi berikut:

$$sum(n) = 2 + 7 + 12 + 17 + \dots + (5n - 13) + (5n - 8) + (5n - 3).$$

Nilai dari n antara 1 dan 10^{12} . Batas waktu komputasi adalah 1 detik per kasus uji. Batas memori adalah 16 MB. Untuk membuat kode program Anda efisien, buatlah formula (bentuk tertutup) dari sum(n) menggunakan pengetahuan Anda yang dipelajari di SMA. Anda dapat membuktikan kebenaran dari formula yang diperoleh menggunakan induksi.

Petunjuk Python: jika a,b, dan c adalah bilangan bulat dan c membagi ab, maka ekspresi (ab)/2 direpresentasikan sebagai (a*b)/2. Ekspresi bilangan bulat a^b ditulis sebagai a**b.

For example:

| Test | Input | Result |
|------------------------|------------------------|---------------------|
| print(sum(1)) | print(sum(1)) | 2 |
| print(sum(2)) | print(sum(2)) | 9 |
| print(sum(3)) | print(sum(3)) | 21 |
| print(sum(100)) | print(sum(100)) | 24950 |
